

EVELYN S.

Evelyn S. is a 1939 wooden gill net fish tug. She was built by Sturgeon Bay Boat Works for William Selman Fisheries of Manistique, MI. She measures 50ft. long and 13ft. wide. *Evelyn S.* also has a 3-cylinder Kahlenburg diesel engine. Like many other fish tugs of her time, *Evelyn S.* has steel plates (or sheathing) on the outside of her hull to protect against the frozen waters of Lake Michigan.

Evelyn S. came to the Michigan Maritime Museum in 1979 to serve as an example of all commercial fish tugs that once operated out of ports just like South Haven, Michigan where she now calls home. She has undergone several restorations and now sits proudly on the Museum campus overlooking the harbor as an exhibit to teach people about Great Lakes historic commercial fishing.
